SUMMARY

An analysis of the true state of the middle class, the myths being told by both the right and the left, and the new economic rules facing workers, companies and government.

This report lays out the myths of neopopulism and the myths of conservatism and goes on to analyze the new economic rules of the 21st century. It argues for “progressive realism,” a framework for how the government can adjust to the new rules to help America and Americans most effectively meet those modern challenges.
