

Democrats Powering the Clean Energy Future

The Biden Administration has paved the way to a decarbonized future, making strides to develop US clean energy manufacturing and deploy as much clean energy as possible as fast as possible. And they've done it all while keeping energy costs low for American families. Here's a snapshot:

More than **\$450 billion** in investments in clean energy—the most ever in US history.

Exported **91.2 billion** barrels of liquified natural gas in the last year alone, surpassing Qatar and Australia as the world's top LNG exporter.

Used the power of the federal government to spark a 5-fold surge in private sector investment, adding **\$186 billion** in private sector money to the federal governments **\$34 billion** in clean energy investments.

Led unprecedented efforts to boost clean energy manufacturing, yielding more than **\$71 billion** in public and private sector investments.
